WORK EXPERIENCE

Quality Specialist|Data Analyst Amazon

11/2021 - Present

Achievements/Tasks

- Audited high-volume operational and fulfillment data to ensure SOP compliance and sustain **95%+ data accuracy** across logistics KPIs.
- Performed root cause and variance analysis on delivery and fulfillment issues, reducing delivery errors by **15%** through data-driven actions.
- Designed and maintained **Tableau dashboards** for real-time performance tracking and leadership decision-making.
- Used **SQL** for **ad-hoc analysis**, **KPI reporting**, and **anomaly investigation**.
- Led locker automation audit initiative in collaboration with operations team, improving delivery accuracy by **25%** through process and automation improvements.

Cad Engineer Cadd Center

01/2019 - 03/2020

Training facility for mechanical and civil related design software.

Achievements/Tasks

- Conducted workshops and seminars on design principles and industry best practices, improving course enrollment by **20%**.

EDUCATION

Post Graduate Program University of Texas

05/2024 - 06/2025

Courses

- Data Science and Business Analytics

B-Tech Amrita University

07/2014 - 06/2018

Courses

- Mechanical Engineering

SKILLS

Python

Pandas

Numpy

Scikit-learn

MySQL

Tableau

Excel

AWS

KNIME

Regression

Classification

Clustering

Forecasting

Data Cleaning

ETL

Statistical Analysis

Time series forecasting

PERSONAL PROJECTS

Supply Chain Optimization using Machine Learning (02/2025 - 03/2025) [🔗](#)

- Analyzed 25,000+ FMCG warehouse records to identify demand-supply mismatches and operational inefficiencies.
- Performed data cleaning, outlier treatment and feature engineering to build high quality model ready datasets.
- Segmented warehouses using EDA and K-means clustering to support optimized resource allocation strategies.
- Built and compared multiple regression models(Linear,Decision Tree, Random Forest, Gradient Boosting), selecting Gradient Boosting as the best performer.
- Achieved $R^2=0.994$ and $MAE=0.0125$, enabling accurate demand forecasting and improved inventory planning.
- Impact: Improved demand forecasting accuracy and enabled better inventory planning decisions.

Car Insurance Claim Analysis (2024 - 2024)

- Analyzed customer insurance claim data to identify key risk drivers across demographics, vehicle types and risk distribution.
- Built interactive Tableau dashboards to visualize claim frequency and risk distribution.
- Identified low-risk and high-risk customer segments, supporting improved underwriting accuracy and targeted premium adjustments.
- Impact: Supported improved underwriting accuracy and risk based pricing decisions.
